

From September 30 to October 3, 2018, COREM will host the 4<sup>th</sup> Symposium on Iron Ore Pelletizing. Current industry concerns and market developments will be at the heart of the scientific program.

**The symposium themes will be:**

- Feed preparation – covering grinding, flotation, and filtration
- Balling – including new binders
- Additives – covering conventional and alternative source
- Induration – including machine design and alternative energy sources
- Process control and modeling
- Quality requirement for ironmaking
- Mineralogy – covering phenomena occurring during induration, cooling and reduction
- Environment – including reduction of GHG emissions and water conservation
- Market developments
- New pellet plants and projects

The Symposium will take place at the Château Laurier Hotel located in the heart of the city, just a few steps from the main tourist attractions.
