

ENVIRONMENTAL POLICY

As a company with multiple and very diversified activities, Corem undertakes to show leadership, transparency, and rigour in the protection of the environment in which it pursues its activities of characterization of ores, experimentation in the laboratory, and semi-industrial control of mineral and metallurgical processes. Corem encourages its suppliers, partners, and clients to make the same commitment with a view to sustainable development. Corem undertakes to deploy the necessary resources so that, beyond compliance with the applicable environmental laws and regulations to which Corem subscribes, Corem continuously improves its environmental performance. Corem undertakes to implement various actions in the following three main spheres:

Pollution prevention and environmental protection

- Manage its activities responsibly to control their impact on the environment.
- Improve the management of its residual materials by applying the 4R-E principle (Reduction at source, Reuse, Recycling, Recovery, Elimination).
- Deploy environmental awareness programs for staff.

Contribution to the fight against climate change and the reduction of pollution

- Reduce its greenhouse gas emissions.
- Promote energy efficiency and responsible energy consumption.
- Encourage the adoption of clean technologies.

Collaboration with Corem's stakeholders

- Foster suppliers, partners, and clients with business practices that respect the environment.
- Engage and maintain a dialogue with its stakeholders involved in the development of public policies on eco-responsible practices in the processing of minerals.

To this end, Corem maintains and improves an environmental management system registered in accordance with the ISO 14001 standard, which makes it possible to determine its strategic orientations in terms of the environment, to set relevant environmental objectives and targets, and to monitor the results achieved. In addition, Corem undertakes to publish, on a regular basis, its environmental performance.
